

# Solar panels in series configuration

## Overview

---

Wiring solar panels in series means connecting the positive terminal of one panel to the negative terminal of the next panel, creating a chain that increases total voltage while maintaining the same current. This configuration is essential for grid-tied systems, long cable runs, and applications. Most solar panel systems are designed with both series and parallel connections. This ensures safety, efficiency, and maximum energy output from your system. In this guide, we focus on.
