

Solar panels on top of solar

Application scenarios of energy storage battery products

Overview

Rooftop solar power, also known as rooftop photovoltaic (PV) systems, refers to solar panels installed on residential or commercial building rooftops to generate electricity. We use Google Earth imagery to analyze your roof shape and local weather patterns to create a personalized solar plan. Compare loan, lease, and purchase options for your solar. If you add solar panels to an existing system, you can increase your solar electricity generation, extend the life of your installation, and create further savings on utility energy costs. Smart monitoring systems provide real-time performance tracking.
