

Solar power plant land policy

Overview

Federal land management policies encourage the development of solar energy on public lands. BLM issues right-of-way authorizations for solar installations, and the Forest Service issues special use permits. Across the 245 million acres of public land it manages, the BLM maintains more than 19 million acres as open for potential solar development, subject to a variance process. After discussing solar land-use metrics and our data-collection and analysis methods, we present total and direct land-use. In a landmark accord, major solar developers, conservation groups, agricultural organizations, environmental and environmental justice groups, and tribal entities announced today their agreement to advance large-scale U. solar development while championing land conservation and supporting local. elopment is large-scale solar photovoltaic (PV) plants. It is guided by a number of considerations — for example. Ground-based, utility-scale solar panel installations used for electricity generation of 1 MW or greater are commonly referred to as 'solar farms' (US Energy Information Administration, 2020).
