

Solar power system home evaluation

Overview

This comprehensive guide provides you with a complete assessment framework to determine if your house is suitable for solar panels. You'll learn how to evaluate your roof, analyze sun exposure, calculate potential savings, and use free tools to make an informed decision. Most homes can benefit from solar in 2025: With over 4.2 million American homes already equipped with solar panels and technology costs continuing to decline, the majority of homes with south, southeast, or southwest-facing roofs and minimal shading can achieve positive returns on solar investment. There are a number of steps to follow when planning to power your home with solar energy. After choosing which option is best for you to use solar (see step 3), follow the steps afterward that apply to you. Solar panel systems transform sunlight into usable electricity. Do you own or rent your property?

First and foremost, solar is most accessible if you own. Estimates the energy production of grid-connected photovoltaic (PV) energy systems throughout the world. It allows homeowners, small building owners, installers and manufacturers to easily develop estimates of the performance of potential PV installations. Operated by the Alliance for Sustainable.
