

# The EMS communication base station is built very close

## Overview

---

When base stations are located close to users, the transmitter power required by the mobile phone and the base station to communicate is relatively low. They are the primary code system used by EMS systems B. Generally. The EMS communication system is a complex network designed to facilitate the rapid and efficient flow of information between various stakeholders. Example wireless network with cellular grid overlay. [Click here for a short animated explanation of how networks work \(wmv\) top](#) What do base stations look like?

Base stations usually consist of a small. The Federal Communications Commission regulates all forms of communication in the United States and has set aside a list of frequencies set aside for public safety called the Public Safety Spectrum.
