

Uninterruptible power supply costs at Tampere Hospital Finland

Overview

Uninterruptible power supply (UPS) systems are used to provide uninterrupted, reliable, and high-quality power for these sensitive loads. but it will add to the cost, size, and weight of. EK SOLAR's recent deployment at TAYS Children's Hospital demonstrates: With Finland's healthcare digitization accelerating, consider: Pro Tip: Always verify UPS compatibility with your existing PDUs - 22% of service calls stem from mismatched connectors! Tampere's unique climate demands UPS systems. The Pirkanmaa Hospital District (PSHP) worked with Eaton to install modern UPSs with supercapacitor technology to ensure uninterrupted operation of hospital imaging devices. In the first phase of the project, Eaton Power Quality Oy, which manufactures UPS equipment in Finland, delivered one 300. Tampere University Hospital is one of the largest hospitals in Finland and provides service for roughly one million Finns and has a capacity over 1 000 beds, employs more than 6 000 people, and includes 34 medical specializations. They also provide a lower cost/kW and, because UPS systems operate more efficiently at higher utilization rates, will have lower energy costs than multiple small systems. In addition to the higher reliability of large UPS systems, centralizing power protection expands the range of redundant. Large and more expensive machines, like Magnetic Resonance Imaging (MRI), Computer Tomography (CT), and X-ray are mainly located in separate rooms and need to be connected to water and air-cooling devices as well as the hospital's electricity network. In addition, there is high-power lighting in.
