

What are the cabinet energy storage system cables

Overview

The core types of cables that play a crucial role in energy storage cabinets are power cables. Power cables are primarily responsible for transmitting electricity from the storage system to inverters and load systems. As we advance towards integrating more renewable energy sources, the SOFAR Energy Storage Cabinet adopts a modular design and supports flexible expansion of AC and DC capacity; the maximum parallel power of 6 cabinets on the AC side covers 215kW-1290kW; the capacity of 3 battery cabinets can be added on the DC side, and the capacity expansion covers 2-8 hours.
