

What can use solar energy to generate electricity

Overview

Solar technologies convert sunlight into electrical energy either through photovoltaic (PV) panels or through mirrors that concentrate solar radiation. These two methods are revolutionizing how we harness. Solar energy is any type of energy generated by the sun. Solar energy can be harnessed directly or indirectly for human use. We use the solar resource to provide daylight, electricity, and heat in four ways (in order of prevalence): Solar PV is the fastest-growing electricity resource in the world. Both are generated through the use of solar panels, which range in size from residential rooftops to 'solar farms' stretching over acres of rural.
