

# Will photovoltaic panels break if they are not laid flat

## Overview

---

Yes, solar panels can break down but they don't have to. With professional servicing and real-time monitoring, faults can be spotted early, resolved quickly, and avoided entirely. While they're designed to be durable and low-maintenance, issues can arise if systems are left unchecked. So, can solar panels break down?

Yes, but with the right maintenance in place. Solar cells do not lie flat primarily due to architectural and functional requirements involved in solar energy capture and efficiency. Their orientation maximizes sunlight exposure, 2. Slight angling allows for optimal energy absorption, 3.
